Who We Are

Building Integrity in Communications

Our company is a leader in providing design, production and maintenance support of communications systems for industrial and municipal customers in Southern California. While our products and systems are primarily focused on the physical layer of networked applications, our Municipal Systems business also offers services and systems for Homeland Security, Government and commercial applications. We also provide a wide range of services and support to our customers through our network of subcontractors.

slide 1 of 5 — San Diego Pure Water Project

City of San Diego Pure Water Project

Atlas Integrated Systems, Inc. is actively involved in the City-wide Pure Water Project in San Diego, handling the installation of extensive Fiber Optic Communication Systems for public utilities and security networks. Their comprehensive services include design engineering, documentation, and providing detailed budgetary estimates for each phase, while ensuring compliance with safety and wage regulations. Atlas operates both as a direct contractor and subcontractor, coordinating closely with various companies to update infrastructure and support system redundancy.

CAROUSEL CONTENT REFERENCE — All 5 slide texts (live UI shows one at a time)	
1	City of San Diego Pure Water Project { name: 'projects', hash: '#SanDiegoPureWaterProject' } Atlas Integrated Systems, Inc. is actively involved in the City-wide Pure Water Project in San Diego, handling the installation of extensive Fiber Optic Communication Systems for public utilities and security networks. Their comprehensive services include design engineering, documentation, and providing detailed budgetary estimates for each phase, while ensuring compliance with safety and wage regulations. Atlas operates both as a direct contractor and subcontractor, coordinating closely with various companies to update infrastructure and support system redundancy.
2	AES-KIUC Lāwaʻi Solar Project { name: 'projects', hash: '#LawaiSolarProject' } Atlas Integrated Systems, Inc. played a crucial role in the Lāwaʻi Solar Project, known as the world's largest solar storage peaker at the time, by installing cutting-edge SCADA communications and energy control networks beginning in 2018. They expertly handled the complex task of integrating new fiber optic and copper communications into the active plant, contributing to the project's success through 2019, with ongoing enhancements for new and reconfigured systems. Post-completion, AES recognized Atlas's expertise by entrusting them with the design of future PoE panels and setting standards for Operations and Maintenance buildings.
3	FY16 MCON Project P-416 Energy PMRF Power Grid Consolidation { name: 'projects', hash: '#FY16MCONProjectP416EnergyPMRFPowerGridConsolidation' } For the Pacific Missile Range Facility, Atlas Integrated Systems, Inc. was instrumental in integrating power from the AES-KIUC Solar site to support the Navy

base's operations. They managed the installation of approximately 29,000 feet of new cabling infrastructure, meeting strict military specifications, and provided certification testing for the base's communication systems to ensure reliability and security.

4 Rialto Bio Energy Facility

{ name: 'projects', hash: '#RialtoBioEnergyFacility' }

Atlas Integrated Systems, Inc. successfully installed roughly 4,800 feet of new 12-fiber OM3 multimode cable for a SCADA network, terminating and testing connections across 12 locations with new patch panels and cabinets. The project also involved the installation of innerducts and the certification of the entire administration building's communication systems to ensure optimal performance and system integrity.

5 Camp Pendleton Data Center

{ name: 'projects', hash: '#CampPendletonDataCenter' }

Atlas Integrated Systems, Inc. was tasked with the crucial job of certifying the fiber optic communications systems for the processing functions at the new Data Center on Camp Pendleton Marine Base. They conducted comprehensive OTDR Testing on over 5,000 fiber connectors within 300 enclosed racks, ensuring that both SIPRNet and NIPRNet connections met rigorous standards. Their work included meticulous documentation and the repair of any components that did not meet the required specifications.

Our Design Process

Using the most relevant technologies allows Atlas the flexibility to retrofit as well as build out an entire new infrastructure. This provides the best ROI for our clients. Our technical expertise is unmatched in our ability to provide as-built drawings and matrices for sites that have little or no information on existing infrastructure. This is crucial for finding what may be utilized, saving thousands of dollars and downtime.

Our Focus

Delivering Sound Solutions for Communications Infrastructure

"We can find a solution for any communication system". That's a bold statement... but we are confident that we can implement a system that encompasses multiple disciplines to achieve our clients' needs and in some cases exceeds expectations.

CONTENT RIGHT SECTION — #TroubleShootingSignalLoss | image flex-1 LEFT + content flex-1 RIGHT | construction-site.jpg

[construction-site.jpg]

Troubleshooting

Signal Loss

Project Description: Troubleshoot South Bay Water Treatment Facility to Metropolitan Bio-Solids Complex Communication Infrastructure

The City of San Diego's pipeline and communications network infrastructure was finally linked together. However, the signal loss was too great from its South Bay facilities to its Operations Center over 22 miles away. Segments had been patched together and installed over a period of more than 10 years in some areas.

Atlas was able to isolate the problem areas, and fix all the problems without disturbing the citywide plant, lowering the signal loss substantially and establishing the communications link the City required.

Learn More

Cost Efficient Network Upgrades

Project Description: New fiber optic network for FPL's Kramer Junction Solar Site

Our client, Florida Power & Light, needed to upgrade its fiber optic network and give it room to grow. They required underground and aerial cost estimates to evaluate which would be the most viable solution. We designed the most cost-effective system and installed over 2 miles of network infrastructure both incorporating both aerial and underground designs while not disrupting plant operations at the peak of their season.

Get Started

Innovative Solutions, High-Tech Methods

Project Description: Hybrid Communications For FPL's Cabazon Wind Energy Site

Once again our client Florida Power & Light needed a solution that was both cost-effective and functional. The SCADA system at their Cabazon Wind location needed updates.

After assessing the plant's needs, and its number of turbines, we incorporated a Hybrid communication system. We used "mesh radio" RF technologies and a backbone fiber optic trunk that would increase reporting speeds without the expense of trenching new fiber optic cable to every wind turbine location.
