PROJECT 1 OF 5 — SanDiegoPureWaterProject.vue

PAGE HERO — #SanDiegoPureWaterProject | sd_water/splash.jpg | :button="false"

City of San Diego Pure Water Project

[sd_water/splash.jpg (bg-fit) (bg-center bg-cover + bg-black opacity-40)]

CONTENT FULL SECTION — #SanDiegoPureWaterProjectMilestones | title: "Project Milestones" | bgClasses: "bg-primary" | :button="false"

Project Milestones

Atlas is currently engaged in multiple projects and under contracts; both contracted Directly and Subcontracting contracts through the Pure Water Program by prequalified General Contractors. This work encompasses the entire City-wide Pure Water Project for all the Processing Facilities and pipelines and DCS processes SCADA Support. The work involves installing miles of new Fiber Optic Communication Systems for City Of San Diego, PUD and various interdepartmental and security Network(s). Scheduling work with various Contracting Companies providing updated fiber optic matrix's of as-built conditions in the field and related locations, including all design engineering, documentation, cable(s), patch panels and component issues to assist in system redundancy in conjunction with other projects. We also provide budgetary estimates for all necessary phases of work for approval and RFQ processes. Atlas provides all labor and safety equipment for proposed work where required, while maintaining Prevailing DIR wages and reporting guidelines.

Innovative Water Purification Technology

Atlas Integrated Systems, Inc. leverages cutting-edge water purification technology in the City of San Diego's Pure Water Project, setting a new standard in sustainable water management. This advanced system employs a multi-barrier approach, incorporating processes such as microfiltration, reverse osmosis, and advanced ultraviolet light with hydrogen peroxide, to ensure the produced water is of the highest quality and meets all state and federal drinking water standards.

[sd_water/water-pitcher.jpg]

Environmental and Economic Benefits

The City of San Diego's Pure Water Project, driven by Atlas Integrated Systems, Inc., delivers significant environmental and economic advantages. By reducing the city's reliance on imported water, the project minimizes the environmental impact associated with long-distance water transportation and contributes to the region's resilience against drought. Economically, this initiative is a game-changer, offering a cost-effective solution for water supply that promises long-term savings for both the city and its residents.

CONTENT RIGHT SECTION — #SanDiegoPureWaterProjectCommunityImpact | sd_water/water-hands.jpg | bgClasses: "bg-cover bg-center" | :button="false"

Community Engagement and Education

Atlas Integrated Systems, Inc. is at the forefront of community engagement and education through its involvement in the City of San Diego's Pure Water Project. The company actively collaborates with local stakeholders, educational institutions, and community groups to raise awareness about water sustainability and the importance of the Pure Water Project.

AES-KIUC Lāwaʻi Solar Project

[lawai/lawai-solar.jpg (bg:fixed bg:center bg-cover + bg:black opacity=40)]

[lawai/lawai-solar.jpg]

Project Activities & Solutions

The Lāwaʻi Solar Project was World's Largest Solar Storage Peaker project at the time. Atlas began installing the multimode SCADA communications systems, Energy Control Network and Single mode Telco system in 2018. We furnished and installed all new fiber optic cable terminations and copper communications, certifying and installing new panels switches and PoE media converters throughout the existing site, to over 30 locations, all while the plant operations were running. The majority of the work was completed in 2019 however, we were mobilized as new locations were added and reconfigurations of the PoE Panels and SCADA systems were required to complete a design and installation for the Operations and Maintenance building. After the project, AES asked Atlas to design the PoE panels for the next projects and to develop a standard for the O&M building as well.

Innovative Solar Energy Technology

The AES-KIUC Lāwaʻi Solar Project stands as a testament to Atlas Integrated Systems, Inc.'s commitment to renewable energy innovation. This project harnesses cutting-edge solar technology to generate clean, sustainable energy, reducing reliance on fossil fuels and lowering carbon emissions. By incorporating advanced solar panels and energy storage systems, the project ensures a consistent power supply, even during non-daylight hours.

Other Significant Past work for this Owner and similar projects

AES Distributed Energy/KIUC Kekaha Solar Project, Kauai
AES Distributed Energy/MOSS West Oahu Solar Project, Kapolei, Oahu
[lawai/solar-sunset.jpg (bg:fixed bg:center bg-cover + bg:black opacity=60)]
AES Na Pua Makani Wind Farm, Oahu
Lalamilo DWS Wind Farm, Hawaii County, Hawaii
Innergex Hale Kuawehi Solar Project, Hawaii County, Hawaii

[lawai/solar-aerial.jpg]

Environmental and Economic Benefits

The AES-KIUC Lāwaʻi Solar Project embodies a significant stride toward environmental and economic sustainability. By tapping into solar energy, the project substantially cuts greenhouse gas emissions, contributing to the fight against climate change. Economically, it provides the local community with a reliable source of clean energy, potentially stabilizing energy prices and fostering economic growth.

Community Engagement and Education

Through the AES-KIUC Lāwaʻi Solar Project, Atlas Integrated Systems, Inc. champions community engagement and educational outreach. The company works closely with local communities, schools, and organizations to spread awareness about the benefits of solar energy and the importance of transitioning to renewable resources.

FY16 MCON Project P-416 Energy
PMRF Power Grid Consolidation

[pmrf_grid/power-pylons.jpg]

Project Activities & Solutions

This project for the Navy's Pacific Missile Range Facility integrated the power generated from the AES-KIUC Solar site we had installed under an earlier contract. It allowed the transfer of power to the entire Navy Base. Atlas produced pull plans and as built patching matrix's, furnished and installed apx. 29,000' of new innerduct and 48 fiber single mode cable in new and existing ducts and hand holes for various SCADA, Power and security networks per Drawings and Rigid Military Specifications. Additionally, Atlas was brought in to certify entire administration building communications systems Providing Certification Testing for both new and existing cabling systems.

Innovative Power Grid Consolidation Technology

The FY16 MCON Project P-416 at the Pacific Missile Range Facility (PMRF) showcases Atlas Integrated Systems, Inc.'s expertise in advanced energy solutions through the consolidation of the power grid. This project employs state-of-the-art technology to enhance the efficiency and reliability of the power distribution system, significantly improving energy management and resilience at PMRF.

[pmrf_grid/power-substation.jpg]

Project Solutions

- Connected the Admin/Range Ops Area, Support Facilities/Housing Area, and Kokole Point Area grids
- Utility interconnections allow load sharing and power distribution between the separate incoming feeders
- Power transfers of excess renewable energy increase system efficiency, reduce costs and improve energy security

[pmrf_grid/power-pylon-clouds.jpg (fixed-bg backdrop-brightness-60)]

Project Goals

- Consolidate the power grid into one continuous system
- Facilitate power transfer between feeders
- Maximize energy efficiency at the lowest lifecycle cost

[pmrf_grid/power-pylon-upshot.jpg]	Environmental and Economic Benefits The consolidation of the PMRF power grid under Project P-416 represents a significant leap forward in environmental and economic efficiency. This initiative reduces the carbon footprint by optimizing energy distribution and usage, contributing to the Department of Defense's sustainability goals. Economically, the project promises enhanced energy efficiency, leading to considerable cost savings and improved operational reliability.

Community Engagement and Education While the FY16 MCON Project P-416 primarily focuses on military infrastructure, Atlas Integrated Systems, Inc. understands the importance of community engagement and education within the broader context of energy and environmental stewardship. Through informational sessions, workshops, and collaboration with local and military stakeholders, Atlas Integrated Systems, Inc. promotes awareness and fosters a culture of sustainability and resilience. Rialto Bio Energy Facility [rialto_bioenergy/rialto-bioenergy-image-hero.jpg (bg-fixed) (bg-center bg-cover + bg-black opacity-40)]	

CONTENT LEFT SECTION — #RialtoBioEnergyProjectMilestones rialto_bioenergy/rialto-bioenergy-image-hero.jpg :button="false"	
[rialto_bioenergy/rialto-bioenergy-image-hero .jpg]	Project Milestones Atlas furnished and installed apx. 4800' of new 12 fiber OM3 multimode cable in new and existing ducts and hand holes for SCADA network per Drawings. We terminated and tested all fibers in 12 locations in 24 new patch panels in new SCADA cabinet(s). Furnished and Installed Innerduct where required and where cable tray is exposed. Additionally, Atlas was brought in to certify entire administration building communications systems Providing Certification Testing for both cabling systems.

CONTENT RIGHT SECTION — #RialtoBioEnergyProjectInnovations rialto_bioenergy/rialto-bioenergy-image-hero.jpg :button="false"	
Innovative Bioenergy Technology The Rialto Bio Energy Facility project represents a pioneering leap in bioenergy technology, spearheaded by Atlas Integrated Systems, Inc. This facility utilizes advanced anaerobic digestion technology to convert organic waste into renewable energy and soil amendments, showcasing a commitment to innovation and sustainable resource management. The project not only diverts waste from landfills but also generates clean, green energy.	[rialto_bioenergy/rialto-bioenergy-image-hero .jpg]

CONTENT LEFT SECTION — #RialtoBioEnergyProjectImpact rialto_bioenergy/rialto-bioenergy-image-hero.jpg :button="false"	
[rialto_bioenergy/rialto-bioenergy-image-hero .jpg]	Environmental and Economic Benefits The Rialto Bio Energy Facility brings profound environmental and economic benefits. Environmentally, it contributes to a significant reduction in greenhouse gas emissions by diverting organic waste from landfills and converting it into clean energy and natural fertilizers. Economically, it provides a sustainable energy source and creates

local jobs, enhancing the economic vitality of the region.

CONTENT RIGHT SECTION — #RialtoBioEnergyProjectCommunity | rialto_bioenergy/rialto-bioenergy-image-hero.jpg | :button="false"

Community Engagement and Education

Atlas Integrated Systems, Inc. places a high priority on community engagement and education in the Rialto Bio Energy Facility project. The company is committed to transparent communication with the local population, offering educational tours and community meetings to explain the benefits of bioenergy. They also collaborate with local educational institutions to foster a better understanding of sustainable energy practices.

Camp Pendleton Data Center

[camp_pendleton_datacenter/datacenter2.jpg (bg-fixed bg-center bg-cover + bg-black opacity-40)]

CONTENT LEFT SECTION — #CampPendletonDataCenterProjectMilestones | camp_pendleton_datacenter/datacenter2.jpg | :button="false"

[camp_pendleton_datacenter/datacenter2.jpg]

Project Milestones

Atlas was brought in to certify entire fiber optic communications systems for all the processing functions throughout the newly installed Data Center, Providing Certification Testing for both SIPER and NIPER Networks for external and base wide connections. We conducted OTDR (Optical Time Domain Reflectometer) Testing for over 5000 fiber connectors in 300 newly installed enclosed racks within the new Data Center on Camp Pendleton Marine Base. Work included all documentation and repair of any and all fiber connectors not meeting R+M manufacturers specifications.

CONTENT RIGHT SECTION — #CampPendletonDataCenterProjectInnovations | camp_pendleton_datacenter/datacenter2.jpg | :button="false"

Innovative Data Center Design

The Camp Pendleton Data Center project, facilitated by Atlas Integrated Systems, Inc., marks a significant advancement in military data management and IT infrastructure. This project involves the creation of a state-of-the-art data center that utilizes innovative cooling and energy-efficient technologies to reduce its footprint and increase operational capacity.

[camp_pendleton_datacenter/datacenter2.jpg]

CONTENT LEFT SECTION — #CampPendletonDataCenterProjectImpact | camp_pendleton_datacenter/datacenter2.jpg | :button="false"

[camp_pendleton_datacenter/datacenter2.jpg]

Environmental and Economic Benefits

Atlas Integrated Systems, Inc.'s work on the Camp Pendleton Data Center emphasizes environmental stewardship alongside economic efficiency. The data center is designed to minimize energy consumption and use renewable energy sources where possible, contributing to the Department of Defense's goals for sustainability.

Community Engagement and Education

Community engagement and education are key components of the Camp Pendleton Data Center project. Atlas Integrated Systems, Inc. actively involves military and civilian stakeholders in the project, ensuring that the data center meets the dynamic needs of Camp Pendleton's operations. Through workshops, seminars, and collaborative discussions, the company fosters an environment of learning and adaptation.
